

1.modify “C:/untitled10/db.sqlite3” in line 37,110 and 119 of testing.py to the path of the django.(That is because in win7 and win8, the testing.py need running with CMD in the admin mode, but CMD in the admin mode will begin with the path of “C:\windows\system32” rather the path of the program.)

2.Run CMD in the admin mode and run the testing.py.

3.double-click the testing.bat to run the management platform progress.

4. The monitor user:

Username is r4

Password is 11111111

The normal user:

Username is r3

Password is 11111111
